Latest news about Audio-Visual-Presentations (AVP)

The free of charge service for data- and video-projection and presentation

(AVP-Newsletter.de)

Editor: Neun Punkt GbR, Hamburg

Publisher: CREAT Hamburg, Senior Editor: Wolfgang Schoelermann

Tuesday, March 18th, 2003

Dear Newsletter Readers,

[To the Table of Contents](#)

in this issue of the www.AVP-Newsletter.com you can find most current news from the data- and video projection/-presentation area, the video conference market and the LED-big screen systems.

Bildungsmesse, Nürnberg (March 31st - April 4th)

**BILDUNGS-
MESSE2003**
■■■■ NÜRNBERG 31.3.-4.4.

The Bildungsmesse 2003 in Nürnberg, Germany, will start on March 31 and last until April 4. We will cover the news on the largest trade fair in the education branch in this Newsletter and also in the next German one, which will be issued on march 31st. The exhibition with its comprehensive range of products and services reaches the target groups from Germany and the neighbouring countries covering all aspects of education from nursery school to vocational training.

More: <http://www.bildungsmesse-nuernberg.de/>

CeBIT, half way mark - Hannover (march 12th-march 19th)

During the first four days the world's biggest computer and technology exhibition, CeBIT in Hannover, had fewer visitors than the year before. Until Saturday more than 300,000 visitors from more than 100 countries was counted by the Deutsche Messe AG, 12 per cent less than last year. Nevertheless, „the CeBIT is a success regardless of the number of exhibitors and visitors“, said exhibition manager Raue. The proportion of professionally interested visitors was more than 90 per cent – like the previous year. „Especially the number of European visitors has grown in comparison to 2002“, said Raue.

An increase has also been registered in the number of visitors and guests from other European countries – from 56,400 in 2002 to 62,100. The number of visitors and guests from Eastern Europe has risen clearly in both absolute as well as relative terms. 12,800 visitors and guests have so far come from Eastern Europe compared with 9,900 in 2002. This region thus accounts for 15.8 percent of all foreign visitors (11.8 percent in 2002). CeBIT would seem to be more attractive for SMEs than in the past. 62.6 percent (60.4% in 2002) of all the professional visitors at CeBIT are employed with small or medium-sized companies with a maximum of 500 employees.

2) Sharp: projectors for inquisitive people

Sharp complements its large offer of data- and video projectors with a new class. The new LCD-projectors, the PG-A10X (XGA, 1300 ANSI lumens), and the PG-A10S

(SVGA, 1500 ANSI lumens) with integrated password security and compact measurement are perfect for the applications at trainings or further educations. Both projectors can be assembled at the ceiling or can project data and video material with a contrast ratio of 400:1 as a flexible free standing unit on the opposite wall. Both projectors are perfect for the spontaneous application in every surrounding because they are very small: width 297 mm, height 89 mm, depth 229 mm.– They are also very light because they have a weight of only 2,9 kg. The projectors support not only the European TV standards PAL and Secam but also the North-American NTSC standard. Additionally the projectors possess an integrated password security that makes unauthorized use impossible.

CeBIT, Hall 1, Booth 7a2 + Bildungsmesse, Hall 7 # 239

[Top](#)

3) EPSON: Color for CeBIT+ the new EMP-7800/8300

Under the motto "EPSON COLOR – Because life's not black & white" - the company presents its latest product innovations and affords for the first time the opportunity to glance at the forthcoming novelties. EPSON presents a number of new projectors from the large EPSON supply at the booth. All these products are presented in the form of "Color City". The mobile EPSON-projectors are perfect for users who are dependent on portable devices. At professional applications at different places the performance must be perfectly right. This also includes the smallest and lightest wireless LAN-projector of its class: the new EPSON EMP-735. EPSON offers a high number of high-performance installation projectors, including the new EPSON EMP-7800 and EMP-8300 for challenging applications. Moreover, there is a multitude of EPSON-projectors at the booth, both – for the homecinema area and for the home entertainment area. With these projectors all games and movies can be blown up to movie format.

More: <http://www.epson.com/>

[Top](#)

4) BenQ: Lifestyle today - Design + Innovation

After one year BenQ exhibits itself again at the CeBIT. The company presents a number of new products. Beside the brand-new DLP home cinema projector PE 8700 ([q.v. AVP-N. 9/03](#)), Ben Q also presents a new plasma screen. The HDTV compatible plasma display BenQ PDP46W1 combines a cool, slender design with a huge 46" diagonal. Beside a contrast ratio of 850:1 it provides a brightness of 700 cd/m². The video optimised format 16:9 delights the home cinema enthusiast but the device is also perfect at presentations. Additional features are a digital zoom and a image-in-image function.

CeBIT, Hall 21, Booth B45

More: <http://www.BenQ-eu.com>

[Top](#)

5) A+K: AstroBeam S130 - DLP-projector for leisure time and business

The Anders+Kern Präsentationssysteme GmbH & Co. KG broadens its offering of its private brand A+K AstroBeam in the data-/ videoprojector area with the new model S130. This mobile DLP-projector with SVGA resolution connects job and leisure time in a perfect way – and all that for a very low price! Everyone who wants to use the light (only 3,1 kg) and very silent (only 37 dB) A+K AstroBeam S130 as a tool for work will highly appreciate its monitor output as well as the extremely high contrast ratio of 2000:1 and the high brightness of 1000 ANSI lumens. The outstanding video quality in 4:3 / 16:9 makes it perfect for the application at home. This can be achieved because of the DCDi-technology by Faroudja that provide sharp images and a very natural color performance.

CeBIT, Hall 21, Booth A 06

More: <http://www.anders-kern.de>

[Top](#)

6) Toshiba: D1+D2 lightweights in retro design

At the CeBIT the Toshiba business area Professional Visual Products brings a new line-up of DLP-products on the market. From now on, the two models D1 and D2 will complement the product portfolio of Toshiba in the "mobile class". With a weight of only 2,4 kg, a light performance of 2.000 (D1) and 2.500 ANSI lumens (D2) and a contrast ratio of 800:1, both new devices are perfect for the mobile application and the video conference area. Both projectors can present images with diagonals between 0,9 and 5 metres. Because of the automatic signal identification the complicated choosing of the right entry source is not necessary anymore. The D1 and the D2 also provide an ECO-mode like most of the Toshiba data- and videoprojectors that reduces the heavy duty of the projection lamp and that lowers the operating noise. Because of the possibility to play-back an additional image across the monitor output, the new projectors are ideal for the application in schools or other educational facilities. Both projectors are available from March onwards via distributors or specialized trade.

7) NEC: Business-projector LT260 in an attractive design

The NEC projector LT260 wins the iF-design award 2003 – an internationally acknowledged price of the iF Industry Forum Design Hannover e.V. - that is donated every year at the CeBIT. This award is a convincing sales argument because the design of an device gains more and more importance concerning the buying decision. The flowing forms, rounded edges of the object and the silver shimmering chassis of the LT260 were the reasons for the jury's decision that consists of international first class-designers.

CeBIT, Hall 2, Booth B20

8) CTX: 46"-Plasma Display – pure movie-feeling

Now CTX also gets into the Plasma Display market. At the CeBIT the manufacturer presents a gigantic 46" model. A very modern, almost avangardistic chassis that gives very room an elegant touch – that is a matter of course with such a product. The CTX is equipped with a visible screen diagonal of 46". More technical data include: a contrast ratio of 800:1 and a luminance of 700 cd/m². The 16,7 presentable colors, the ultra fine pixel pitch and a 160° angle guarantee brilliant performances and create a real movie-feeling in every living room in a 16:9 format. The display can present images in XGA resolution – silent and absolutely flicker free. Extensive connection possibilities offer a flexible usage.

CeBIT, Hall 21, Booth B49

More: <http://www.ctxeurope.com>

[Top](#)

9) Panasonic: brilliant mobile projectors

At CeBIT Panasonic presents its latest generation of ultraportable LCD-projectors. The models PT-LC56E (SVGA) and PT-LC76E (XGA) shine in the new design of the Panasonic projector line-up, have lost their weight and just weigh a little more than 2 kg. The devices will have probably 1.500 resp. 1.300 ANSI lumens and a contrast ratio of 400:1. The operating noise will be under 28 dB. They are equipped with a vertical trapezoidal correction and can be used in saving mode (lamp-life up to 3.000 hours). Moreover they are equipped with the "Digital Cinema Reality" technology – like projectors from the home cinema area – and are perfect for the application at home. The models will be available at the end of April 2003.

CeBIT, Hall 1, Booth 6c2

10) Sony: „Say cheese“! VPL-CX5 + digital camera

Sony makes its customers happy. If a customer buys a VPL-CX5 projector he or she will get Sony's latest stroke of genius – the digital camera Cyber-shot U10 – for free! The ultra portable projector VPL-CX5 convinces not only because of its noble design - for which the projector received the IF-Design Award 2003 - but also because of its inner values. It features a XGA-resolution and the impressive light power of 2.000 ANSI-Lumen. A real highlight is the memory stick function that makes a perfect connection with other devices possible, e. g. with the Sony digital camera Cyber-shot U10. The noble and highly compact digital camera weighs just 113 g and is equipped with 1,3 mega pixel. The Sony-Bundle operation will count as long there is enough supply. It's valid from February 1st until march 31st. The Sony Promotion Bundle is available at Sony Professional centers, at Sony Professional partners and at all IT-/AV-dealers.

CeBIT: Hall 2, Booth C02 + Bildungsmesse, Hall 8, Booth 305

[Top](#)

11) PLUS: U4-series - 1500 ANSI-lumens in the 1,5 kg-class

In February the PLUS Vision Corp. presented its new DLP-projectors of the U4-series in Japan. The new projectors have 1.500 ANSI lumens and are 1,5 times brighter and have a contrast ratio of 1500:1 that makes them two times more powerful than the U3-series. So the projectors U4-131 (XGA), U4-111 (SVGA) are the most high performance mobile business-projectors of the 1,5 kg class. The U4-series is an upgrade of the U3-series – the most sold projector series ever - with over 100.000 units. The new generation of DMD-chips by Texas Instruments, a revised design, better optics and a lot more of improvements distinguish the new projectors. The U4-projectors support "short-focus-lens" and therefore make a projection of a 60" image with only 2 m distance possible. The Eco-Mode allows projections with 80% of the normal brightness. The projectors support the DVI- standard and also digital Hi-Definition broadcast signals (720p, 1080i). Both new projectors are available over the specialized trade.

[Top](#)

12) Berger/AmPro: AmPro series 4000 is on the market!

Berger big screen projection - the specialist from Ludwigshafen, Germany, presents its new AmPro series 4xxx. In developing new projectors, the wishes of the user and the demand to handle individual projection applications were most important. The innovative product range offers the right projector for almost every application. The AmPro LCD 4100 cinematic art (1250 ANSI lumens, 1280x720 resolution, 16:9) is perfect for a real movie-atmosphere at home. For the mobile presentation the AmPro LCD 4200 (XGA, 2.200 ANSI lumens, 36 dB) is suited best. A real all-rounder is the AmPro LCD 4300 that provides 3.300 ANSI lumens and a XGA-resolution. A real profi-projector is the AmPro LCD-4400 (XGA, 4.400 ANSI lumens, 8,2 kg, interchangeable lenses) that is only exceeded by the tandem-rack LCD-4400-T2 whereby the light performance can be doubled (weight: 25 kg).

13) Philips: bSure Brilliance – the new generation

Philips broadens its price winning bSure projector-range by two new models: bSure XG2 and SV2 Brilliance. With light performances of 2000 and 2200 ANSI lumens they belong to the brightest projectors of their class. The high performance and reliable devices are the first choice for sophisticated customers in big companies and educational facilities. The projectors support PS/2 Mouse-Loop Through for the control of the mouse cursor by the remote control. The Monitor-Loop-Through is of advantage for teachers and speakers because they don't have to show their backs to the audience anymore to see the projected images. The bSure Brilliance series has also new functions that are especially interesting for companies. A remote control with a laser pointer belongs to the standard accessories as well as the "Your Logo"-function that boots the company-logo instead the standard opening screen during the starting of the computer. A comfortable Softbag

for the security is also included in the scope of delivery of the bSure Brilliance-models. Both new bSure Brilliance projectors will be available from July 2003 onwards.

14) Kindermann on CeBIT + Bildungsmesse - 6 projectors for all uses

The completed product portfolio consists of six high-performance multimedia projectors for all uses, in the so called Mobile-Class, Desktop-Class and Installation-Class. Especially, for mobile presentation and home cinema the two new models KS 100 and KX 100 were developed. Within the Desktop-Class Kindermann introduces the new KXD 2300 on the CeBIT, a high-performance projector for presentations, conferences and any application in the company environment. Kindermann is successfully working with distributors and representations all over Europe and will also exhibit at the Bildungsmesse in Nürnberg, Germany, March 31 – April 4.

CeBIT, Hall 1, Booth 1c3 + Bildungsmesse Hall 1, Booth 214

15) Datavision at the CeBIT / new Internet performance

Datavision will present the latest products of manufacturers like SANYO, NEC, Plus, Optoma, Hitachi, LG Electronics, Projection design, JVC, Philips and ASK. One highlight will be the first 40" TFT monitor of Samsung. Another highlight is the Hitachi EM-Panel which basis is a 15" TFT monitor. The lecturer does not obstruct the view and always has eye contact with the audience. A pencil displaces the mouse and the PC control is made directly via the display. Datavision will also present application oriented video-conference- systems by Polycom for the first time. You will find further information on the complete new created internet pages by Datavision. Here the visitor not only finds a complete overview of the product range but also some very useful help concerning the best choice for a projector if he/she clicks on the button "assistant".

CeBIT, Hall 21, Booth B01

16) SMART DViT: new technology for touch-sensitive displays

SMART Technologies Inc. announces DViT (Digital Vision Touch) technology, a breakthrough technology platform for touch-sensitive displays. DViT technology uses proprietary digital cameras and sophisticated software to determine the contact of a finger, stylus, pointer or other object on a display. No special pens or tools are required to interact with the display, nor are special materials required on the touch screen, making the image crystal clear. DViT technology is being introduced on two of SMART's premium products -- the Rear Projection SMART Board 3000i and the SMART Board for Plasma Displays interactive whiteboards. By replacing analogue resistive technology with DViT technology, SMART has improved the brightness and increased the contrast ratio of the image. The Rear Projection SMART Board 3000i and SMART Board for Plasma Displays interactive whiteboards with DViT technology are now available.

17) InFocus/AV-Solutions: new distributor for InFocus "ScreenPlay"

The company AV-SOLUTIONS GmbH i.G., that emanated from the company RP-Media Consulting that shut down its business just recently, at the end February, will take on the distribution of the ScreenPlay-products of the manufacturer InFocus. AV SOLUTIONS will offer these products in Germany over special distribution channels. With this new product group AV-SOLUTIONS possesses a well-balanced, overviewed and very diversified product portfolio concerning the price-/performance ratio. As a distributor of companies like LG Electronics and projectiondesign as well as a long year partner of companies like ATRIUM and ASK, AV-SOLUTIONS possesses a solid basis for a successful co-operation with the distribution partners. With the enhancement of the distribution team and the enlargement of the back office, a familiar support of the customers and a very quick handling of the customer-concerns and assignments is guaranteed.

20) ComPeri: BOXLIGHT-distribution contract + two new models in the 3 kg class

The distributor ComPeri from Dachau, Germany, takes on the distribution of BOXLIGHT products in Germany. Right on time for the CeBIT, BOXLIGHT presents new projectors. Besides the SP-46d (SVGA, 1500 ANSI lumens, 2,7 kg) BOXLIGHT also shows the new XP-56d (1400 ANSI lumens, 2,7 kg). Both projectors feature a digital trapezoidal correctory, digital zoom, a picture-in-picture function and an automatic signal recognition. BOXLIGHT is acting as a manufacturer of displays and presentation technology under its own name but also for manufacturers like InFocus, Hitachi, Sony, Proxima and Epson. The service of BOXLIGHT includes a 15-days money back and a two-year guarantee.

21) Hitachi-Software: StarBoard Suite Version 5.0

With the new presentation-software of Hitachi Software, all previous StarBoard software-programs will be combined. Two basic installations are offered for business people and for schools, that are perfect for their special requirements. New tools allow an individual composition of the presentation surface. To make presentations easier, an object-management-software and a lens were installed. The lens has three different degrees of sharpness, and makes it possible for the user to highlight important points. The object management changes drawings and text-parts into objects so that they are easier to handle. The integrated signature-identification allows the smoothing and the enhancement of the characters. The integrated ShareWizard conference solution connects with the help of TCP/IP any persons at different places. Thanks to the small data bandwidth, it is possible to take part at conferences via mobile phones.

22) Projecta: i-PortaLite – the interactive, portable projection screen

During the CeBIT, Projecta presents the interactive projection screen i-PortaLite. With the portable i-PortaLite it is possible to perform interactive presentation at every favoured place. With the built-in sensors and the eBeam pointer, the projected presentation is controlled. Also remarks can be presented optically. I-PortaLite is perfect for interactive meetings via the internet with users all over the world. Of course i-PortaLite can be also used as a 'normal' projection screen. Visitors of the CeBIT can take a look at the interactive projection screen at the Projecta booth.

23) WACOM: new interactive Pen Display for the education market

The WACOM Europe GmbH extends its Interactive Pen Display range and adds the PL-700. The new product has especially been developed for the use in the area of education, teaching and training. It is provided with a 17" display and with the WACOM patented "Penabled Technology". With the pressure sensitive and wireless pen for which you do not even need any batteries, the user can work normally and is able to write directly on the surface of the monitor during his presentation. The PL-700 is the ideal input medium for presentations, Whiteboard-applications or at video conferences. The

display has a SXGA resolution, 24 bit colour depth and is compatible with all SXGA projectors. WACOM is going to show the PL-700 at the trade fair for education, "Bildungsmesse" in Nürnberg (31.03.03-04.04.03). The PL-700 will be available for the price of 2795 Euro (suggested retail price, VAT excluded) from March 2003 onwards.

CeBIT, Hall 1, Booth 4d3 (at ADF workgroup dig. photography) + Bildungsmesse, Hall 8, Booth 8-108

24) TDS Promethean: ACTIVboard in 48" on this year's CeBIT

Since the mid-nineties the ACTIVboard concept has proved to be the best solution for interactive teaching. In the last year TDS Promethean installed more than 12,000 systems worldwide. This is a tremendous result for the only European manufacturer of interactive whiteboards. This success story will be beat by the new ACTIVboard in 48". The ultra-portable ACTIVboard was presented for the first time in January on the BETT-Show in London. Due to multiple requests, TDS Promethean has developed this handy ACTIVboard which includes a table stand and a carrier bag (optional). It is designed for those who do many presentations 'on the road' and who do not want to miss the advantages of the ACTIVboard, in particular the use of the ACTIVstudio software. If you would like to see the ACTIVboard live, you are welcome to visit TDS on CeBIT.

25) GTCO CalComp: New MeetingBoard/-Pad at CeBIT

At the CeBIT, GTCO CalComp presents directly at two booths the Meeting Board, the electronic presentation board and the MeetingPad, the small wireless writing tablet – both with integrated Bluetooth-technology. The MeetingBoard is presented in its new size of 75" (190 cm) and the visitors can also see the new version of the InterWrite software. The new software offers a number of great functions like miniature images so that the user can directly chose the page, has more editing possibilities for texts and objects, the import of screenshots and signature-conversion and its import into other applications. Every conference member, trainer or presenter can handle a computer and also a MeetingBoard with the help of the MeetingPad, and can also write and draw onto every projected application without leaving his/her seat. Because of that, conferences, seminars and internet conferences will get more and more simpler with the help of the MeetingBoard and the MeetingPad and every user saves a lot of time and money.

27) NEC-Mitsubishi: "Quality is visible" - Highlight: 40" NEC LCD 4000

NEC-Mitsubishi Electronics Display offers a lot of new products to offer at this year's CeBIT. The highlight at the booth of the monitor-manufacturer is the new NEC LCD4000 – a 40" presentation-display for the performance of static and moving information. With the presentation of its first big-format presentation-LCD-device – the NEC LCD3000 in autumn of 2002, NEC did the first step into this growing market segment. Information-displays make everybody much easier in many ways and sometimes we aren't really aware of this fact. E.g. most people who go on holiday get the information about the right arrival and departure time with the help of such displays. The application possibilities are never-ending and will become more manifold in future. Especially for this market segment NEC-Mitsubishi has developed its new 30- and 40" LC-Displays NEC LCD3000 and NEC LCD4000. The company is the first one to bring LCD-screens of this size on the market. The information displays NEC LCD3000 and NEC LCD4000 provide a high image quality and a number of innovative and already patented features (resp. features that are applied for a patent).

28) GMK: 10 conference rooms for SAP + CeBIT-performance

The GMK mbH in Filderstadt near Stuttgart, Germany, received the acceptance of bid by SAP to equip 10 conference

rooms in the administration building in Hamburg. NEC-projectors that were mounted at the ceiling, together with intelligent switch-overs, Bose-soundsystems and extensive installation equipment came into operation. The installation was rounded off by the application of approved AMX-media controls that were also used during the last installation. At CeBIT, GMK presents a number of new products. The "ceiling lift II" is also presented as a new revolution. This one can be integrated much easier into media- technical overall concepts.

29) BARCO supports world-business-forum

The world-business-forum, the leading global organisation for advancement of partnerships in the areas business, politics, humanities and other leading institutions of our society that are committed in conservation and the improvement of the world situation, had its 33. annual meeting at the end of January in Davos, Switzerland. Barco, member of the world-business-forum since 1986, supported again as a strategic partner the meeting with all-in-all 16 projection solutions that were installed in the congress hall, the conference rooms and the executive's lounge. The innovative projectors of the iQ-series with their high brightness, high resolution and perfect color accuracy, accomplish the typical demands of presentation- and conference applications at the world-business-forum. The series iQ (pro) is made of 13 innovative projectors (between 1800 – 4200 ANSI lumens) for presentations and educational applications.

30) more3D: New software for versatile 3D-projection on CeBIT

After a couple of months of development more3D introduces the new software version 3.0 for the 3D stereo production to the market, which makes the need of an external splitter box for PC surroundings redundant. The new software has been improved in detail: from a built-in test picture generator for adjusting stereo projectors to dynamic depth optimisation and support of professional 3D operations! The main attraction: Almost any Direct3D operation can be run together with the more3D software. Optionally there are additional modules like a stereo slide viewer for pictures in JPS/JPG format or a stereo video player, which can replay two independent MPEG streams simultaneously.

31) InfoComm Europe 2003 will take place as planned

„The InfoComm Europe will take place **from November 19 to November 21 2003 in Cologne**“, as Bernd Aufderheide, general manager Koelnmesse, has announced this week. The plans of ending the cooperation with ICIA, International Communications Industries Association, Inc., do not affect the realization of the event in 2003. „It's a pity that we will not work together any more in 2004“, says Aufderheide. Nevertheless, Koelnmesse has the know-how and the competence (as a organizer of photokina) in the branch of visual communications to be able to present a professional and future oriented concept in the future. After 2003 the Koelnmesse will continue the event under a different name but stick to the idea of providing an annual business forum to the international AV branch. To this year's InfoComm Europe the organizer expects more than 200 exhibitors from over 20 countries.

32) HKS-CADDY: mobile light screen for front and back projection

Only one surface for two kinds of projection! This mobile light screen with removable and individually usable single elements is equipped with a handle and wheels for easy transportation. The attractive housing and foldable feet made of aluminium guarantee high quality, functionality and design for the user. The apron can be used as a transportation surface. After installing the light screen, it is possible to turn and adjust it even during the presentation. It can also be used as a clipboard for a Laptop or the presentation documents. The handle, the small wheels and the tray can be taken away. The screen is folded out with the two aluminium arms and gets an ideal flatness through a special technique. The screen can be used for front- as well as for back projections. High quality, best materials and an excellent design are warranted.

33) MediaVision-world premier: a back projection advertising pillar

MediaVision is presenting a world premiere on CeBIT 2003. The first round multimedia advertising pillar with integrated back projection screen. At the heart of this classical advertising tool are three MediaVision display projectors with

integrated mirrors which redirect the image. The advertising pillar is always presenting the latest adverts and information – infotainment on the smallest space. The pillar can be applied almost everywhere like for example in hotels, waiting lounges, airports, train stations, shopping centres, on concerts, cinemas, discos or in fitness and wellness areas. The basic version is available with a diameter of 1500 mm at a size of 2100 mm. Without the advertising pillar corpus there are endless application opportunities of this “360° all round medium”. The recommended retail price for this back projection advertising pillar is EUR 27.000,00 plus VAT. It also offer a further innovation: The system offers an excellent price performance ratio as it is possible to buy it with a leasing payment of only EUR 499,00. MediaVision is now looking for new sales partners. Special trade dealers are now dealing the sales.

34) 4D-Vision: 2D + 3D - world premiere on the CeBIT

4D-Vision, Jena producer of three-dimensional flat screens, presents the first display that is reversible between 2D and 3D. The prototype of this 15 inch 2D-3D-display was developed by 4D-Vision engineers in the past six months and realizes a 3D vision for several viewers simultaneously without using 3D glasses. Switching between 2D and 3D is simply done by pressing a button. Another advantage of this new product: the switching between 2D and 3D can also be carried forward and realized on LC-displays.

35) NEW: Thisplay - the art of vision – with elegant design

The displays by designer Ernesto Gross from Zurich bribe through their simple elegance and high functionality. Field of applications are museums and galleries, shops and top-shops, information centres and meeting and reception rooms. The models “Vision” 46, 62, 450/170 and 180 (the numbers are for the height of the products) featuring a DVD-drive (Pioneer PDV-20), play DVDs, DVDRs and Video-CDs. Further features are: auto start, code free, PAL/NTSC, 100 to 240 volt, EMV-conform. Screen size: 6.8 inch (Vision 46), 10.4 inch (Vision 62, 150/170) and 15 inch (Vision 180), SVGA, 250-300 cd/m², without mirror reflex, mono and stereo. The individual models are available with TV-, Video- and PC-connection as well with touch screen. In the new product series “PC-Vision” 62, 150 and 180, there is a PC with DVD/CD-ROM combination drive with keyboard and mouse integrated. Infra-red as well as Touch screen are available optionally. The PC-Visions-products are deliverable from May onwards. The manufacturer searches for further sales representatives (m/f) in Europe.

37) SCREEN.NT: New in the renting park - dnp Detachable Holo Foil

The ultra thin foil is a version of the already existing Holo Screen. The advantage of this foil is the direct attachment and detachment on shop windows and other glass surfaces so that it is possible to install the foil again and again in different locations. For easy installation/disassembly of the fixable Holo Foil a complete installation kit will be provided. This is ideal for shops and centres with changing exhibitions, changing decorations or rental companies, fairs and events. The specifications of the fixable Holo Foil are identical to those of the dnp Holo Screen. It is a holographic film that only absorbs light which is projected in an exact angle of 35° and ignores other surrounding light. The Holo Foil is compatible to all one lens projectors. The projector can be installed above at the ceiling or below on the floor. The Holo Foil is available in 60” screen diagonal.

38) "Science Fiction made by JVC" at the CeBIT 2003

In cinema spaceships touch sensible screens are nothing special. In our world these Touch Screens can be found from time to time. New by JVC Professional is an outsized flat screen in 50". It is ideal for menu-driven presentations at which it should be possible to draw with a finger. This world innovation can be gazed for the first time at the JVC booth on the CeBIT 2003. For the brand new High-End projector DLA-SX21 also applies: „Future will be buyable“. The delivery of the first projectors takes place in these days. The already presented DLA-SX21 on the photokina last year is considered as trend-setting in projector technology. The D-ILA system by JVC which nearly produces none blanks between the pixels enables high true colour reproduction, high contrast and movie resembling pixel free representation on smallest space. The DLA-SX21 is even brilliant at daylight with 1500 ANSI lumens weights only 6 kg and has the measures of a briefcase.

39) Hitachi: XGA-Projector with extra long durability

The Hitachi Digital Media Group presents the CP-X870D at the CeBIT. The new CP-X870D is a long-lasting LCD-Projector which has been developed especially for advertising efforts at POS / POI. The new projector combines a large-size display for ads and advertising with an extraordinary long durability and thereby low maintenance cost. Video and computer inputs give the user the choice to show advertising films or play individual designed offers directly from the computer. The projector is network-compatible per standard-cable-LAN or Wireless-LAN and possesses components of first class quality and a highly efficient cooling system so that the optical parts inside of the projector are claimed lowly. Hitachi tripled the projectors durability and therewith guarantees the users a lifetime of more than 10,000 hours. The projector offers both aspect ration 4:3 as well as 16:9 and the so called "My Screen" function which enables the user to design individually the opening image with graphics and texts. The CP-X870D is available from now on for €6400,- (recommended retail price incl. VAT) in specialised trade.

40) VITEC GmbH: Enjoying videos instead of frustrating trips

Enjoying videos instead of getting frustrated during trips is the theme of VITEC's booth on CeBIT. These two contrasts are themed on the booth where videoconferencing is the main subject. Customers can see the frustration of everyday travelling on the one hand and on the other the comfort and efficient benefit that video conferences show in business life. As these themes already show, the product range of the manufacturers

Polycom, TANDBERG and VCon are equally diversified. VITEC is also announcing its start into the multipoint – service business. Their service provider concept is being presented at CeBIT for the first time. VITEC underlined its demand to deliver the enjoyment of video instead of the frustration in travelling by brand new products and solutions. Polycom presents its new developments which came to the American market in February, for the very first time to a large German audience. VITEC who agreed a partnership with TANDBERG is also presenting the new TANDBERG 6000 videoconferencing system.

41) G+B: 20 years Gahrens + Battermann

For 20 years Gahrens + Battermann furnishes exhibitions and events with media technical equipment. The rental pool with video-, audio-, light- and IT-Technology is counted among the biggest in Europe. At the 8th of July 1983 Kurt-Werner Gahrens and Juergen Battermann founded the Gattermann + Battermann GmbH. "The at that time young area of "Video" gained increasingly importance as an ideal presentation medium at fairs and events. For quick distribution and rental supply a professional provider was yet missed on the market – the idea arose to establish a "Media-Rent-Service" ", recalls company founder Kurt-Werner Gahrens. The constitution of branches on big exhibition places succeeded; first of all in Hannover, Frankfurt and Munich, later in Hamburg, Berlin, Duesseldorf, Stuttgart and Vienna. To the video area followed light and audio products, large displays and IT applications. Also the know-how about performance of large events for example at general business meetings, big fairs etc. has been successfully enlarged. Today specialists are available in the company for every area. The 20 years of age jubilee offers an occasion for celebrating. Every office is going to invite year to different events during the whole.

42) Mitsubishi XD300U: Build for long-running business

With the new DLP-Projector XD300U the XD200U gets a worthy follower and Mitsubishi enhances its extensive product range of ultra-portable presentation projectors. The XD300U is predestined for long-running applications. It features the new 0,7" DMD 12 degree DDR Chip and a lamp with a long lifetime of about 4000 hours. The innovative new model offers a luminous intensity of 2100 ANSI lumens with a phenomenal contrast ratio of 2000:1. A XGA-resolution together with the award-winning Natural Color Matrix and the new "DCDI" Linedoublers by Faroudja delivers brilliant light intensive images in every aspect. In addition to the appealing design as well as the low weight of only 3 kg the comfortable low sound level provides for attention. So the XD300U "whispers" with only 30dB – a unique value in this performance class.

44) eyevis: Modern control room visualisation

During the last years a change has taken place in the performance technology regarding control stations and control rooms. In the meantime projection screens, composed of so called cubes, have substituted the classical mosaic walls. It is very important to know that cube-systems are easier to upgrade and that they are a good deal better for the increasing flexibility demands, e. g. the possibility to present many different sources. The eyevis solutions have already proven their reliability in long time (24h/7 days) operations. eyevis develops and distributes big screen solutions – from back projection units, controllers until intelligent software solutions. Therefore eyevis is able to deliver full and perfect customized visual systems out of one hand. Eyevis' large video displays allow the necessary overview especially in the following areas: traffic control, telecommunications, security environments, at emergency services, in broadcast areas, in computer centres as well as in the areas power, water, wastewater or manufacturing.

47) M-CATEC: ZINWELL ProV+ - one for all

The company M-CATEC/ZINWELL is presenting its new external ZINWELL ProV+ (PV-500) at CeBIT. The product is available with the Philips SAA711 8E Chip which is normally only used in high-class products. This product does absolutely all: TV /cable reception as well as TeleText with Fasttext as well as Top functions. Apart from this it is also a Stereo Decoder, a Progressive Scan Converter, a Video Scaler, a Video Converter and a Video Switcher. In comparison to its predecessor and basic model the ProV, the ProV Plus also offers TeleText with Fasttext. A2 (Zweiton) and NICAM 728 Stereo with automatic 124 Channel search within the 47-862 MHz area. A 1024 x 728 resolution and a refresh rate of 60 Hz makes the device perfectly available for high quality TFT screens. For its ProV and ProV+ models that are targeted for the consumer market, the manufacturer is looking for distributors/dealers in various European countries and interested parties may address themselves to rainer.pitwon@m-catec.com.

[Top](#)

49) Vigatec: new Universalscaler + Linedoubler/switcher

Vigatec completes its product line with two new products: the DUNE-Fi and the FX2+. Both are modifications of existing models. The DUNE-Fi: is the „small“ DUNE-F (limitation of the frame rates to 50 Hz for PAL signals and 60 Hz for NTSC signals and the inputs 6 – 8 were only looped through whereby the scaling and processing of HDTV or progressive video is not possible). The DUNE-Fi features in its latest version the legendary Faroudja chipset. With the device-version an attractive alternative is offered for displays and digital projectors in the middle price segment. As a matter of fact the narrowed features were realised in an attractive lower price. The second novelty is the Linedoubler FX2+. In opposition to the FX2 the 2 composite video inputs were replaced by a HD interconnect input. With this configuration it is possible to loop through a progressive video signal or a PC-source to the projector / plasma, besides 5 different standard video-signals.

57) Geha: To see more – to understand more

„To see more – to understand more“ was the motto of the Geha-Werke GmbH at this year’s CeBIT 2003. The company presents cutting-edge product innovations. The data-videoprojector Geha compact 235 is one of the highlights. This projector in XGA-resolution features 1200 ANSI lumens and is perfect for the application in educational facilities and auditoriums because of its high quality image creation. Concerning the SVGA field, the Geha compact 145 is also perfect for the application in the education-area. This LCD-projector provides unique images, features 1200 ANSI lumens and convinces because of its very easy and clear handling. Geha also presents the high performance DLP-projector compact 270 in its new design. The device impresses the user with a XGA-resolution, a contrast ratio of 900:1 and a brightness of 2300 ANSI lumens beside a horizontal and vertical keystone-correction. Other projectors that are presented at CeBIT are the models compact 248 (XGA, 1500 ANSI lumens) and compact 107 (SVGA, 1000 ANSI lumens) and as well as the CleverBoard, an interactive whiteboard.

58) Panasonic Broadcast: HD-Premiere with the traditional orchestra of Dresden

The “Mitteldeutsche Rundfunk” (MDR) (national TV-broadcaster) has produced a complete concert for the first time in High-Definition-Format HD-D5 by Panasonic in cooperation with Ottonia Media GmbH. The occasion was the inauguration of the new conductor of Dresden’s traditional orchestra, Bernard Haitink, in the Kulturpalast in Dresden. The signals of eight HD-cameras were connected to six HD-MAZ of the type AJ-HD3700AE to make a flexible post production possible. The necessary outside broadcast van was rented by Alfacam in Belgium because comparable mobile production units are not available on the German speaking market. For the MDR-employees who are responsible for this production, the HD-premiere was a reference that can arouse the interest for such a format in other editorial staffs. With the HD-D5 studio recorder, Panasonic offers a leading device concerning the production of high-resolution programs. The device is already a standard in the post production and the film mastering.
